

KINGTONE SWITCH INSTALLATION

Install The Kingtone Switch As Follows

1. Solder the Kingtone Switch as shown in the diagram.
2. Reassemble the guitar, but leave the Kingtone switch on the outside of the guitar.
3. Remove plastic protector tape from the slide switch.
4. Make adjustments to the treble bleed settings until you're happy.
5. Open the guitar back up and tightly install the Kingtone Switch with washer and nut.

Add the White, Red and Black wires to the volume pot as shown.

If installing the Kingtone Switch on a Strat guitar, we recommend using the remaining tone pot to control either all pickups or just the middle and neck.

Use the wire taken from the middle leg of the old tone control and add it to the remaining tone control's middle leg and solder in place.
